Res. 67:559-565 (2002).

Puncosci. Res. 67:559-565 (2002).

PUNCTION: Potent neurite outgrowth inhibitor which may also help block the regeneration of the nervous central system in adults.

Isoform 2 reduces the anti-apoptotic activity of Bcl-xl and Bcl-z. This is likely consecutive to their change in subcellular location, from the mitochondria to the endoplasmic reticulum, after binding and sequestration.

SUBUNIT: Binds to RTNAR. Interacts with Bcl-xl and Bcl-2.

SUBCELIULAR LOCATION: Integral membrane protein. Endoplasmic

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         141
Series: IRAK Plate: 175 Row: a Column: 9
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 13929187
This clone has the following problem: The cds is short compared to the longest cds in the locus.
